

ARE YOU
LIVING
IN A
TOXIC
HOME

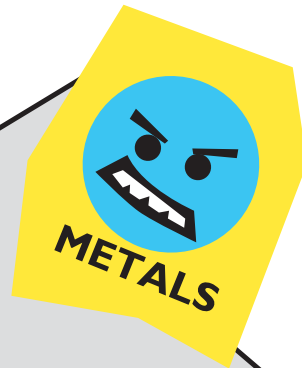

The most common
poison exposures for
children were ingestion
of household products,
such as cleaning substances.
Chlorine is the **number one**
cause of **child poisonings**
in the U.S.

150 chemicals

found in the home
are associated with **allergies,**
birth defects, cancer, and
psychological disorders.

PHTHALATES

90% of toxic hazards are caused by the inhalation of vapors and absorption of hazardous particles.

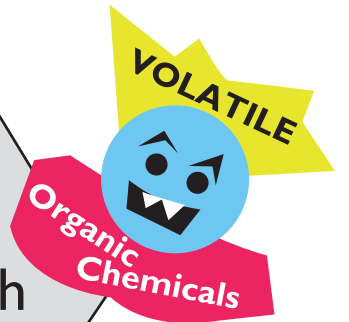

FURANS

organochlorine

INSECTICIDE

The dramatic increases in rates of asthma in women in the past 10 years are believed to be due to women's longer exposure times to household chemicals.

Organophosphate Insecticide Metabolites

Women often work closely with potentially toxic chemicals, and preliminary research suggests that their physiology is more conducive to absorbing and carrying these chemicals. Research estimates the health care cost of U.S. women's environmentally associated diseases is \$12.2 billion annually.
